

LED House Sign Installation Guide

Congratulations on your purchase of an LED house sign! Here are the step-by-step instructions to help you install your sign with ease:

Materials Needed:

- Drill
- Duct Tape
- Fishing Rod (any thin small rod)
- Silicone (glue)
- Electrical Tape

Step 1: Placement

Carefully decide where you want to install your LED house sign. Once you have chosen the perfect spot, place the included template paper on the desired location and secure it in place using duct tape.

Step 2: Mark and Drill

Using the template provided, marked small circles are where the screws will go in. Use a drill to make holes in those areas. Also, mark the black dots on the template where you will need to drill all the way through to fish the wires inside the wall.

Step 3: Silicone Filling

After drilling the holes, fill the small holes with silicone (glue) to protect the wall from water and other elements.

Step 4: Spacer and Screw Placement

Attach the screws to the spacers that are behind each letter.

Step 5: Wiring

Attach a fishing rod to the wires that are attached to each letter. Use tape to secure the rod to the wire.

Step 6: Mount the Sign

Carefully place the sign in the desired location, ensuring that the wires are behind the wall. Make sure to leave a gap between the sign and the wall so that the lights can scatter and give a better visual effect.

Step 7: Wire Connection

Connect the red wire with the red and the white wire with the white. Ensure that all wires are properly connected and then cover the connections with electrical tape.

Step 8: Power Adaptor Connection

Take the power adapter and cut off the edge. Strip the black and red wires and connect them to the sign (Red with red and black with white) and plug in the power adapter.

Step 9: Check the Lights

Once everything is connected, the lights should turn on. Check to make sure everything is working before proceeding.

Step 10: Seal the Hole

Using silicone, seal the hole where the wires are going behind the sign to protect it from water and other elements.

Step 11: Final Touches

Peel off the protective covering on the sign and make sure it looks great. Your LED house sign is now ready to be enjoyed!

We hope these instructions help you install your LED house sign with ease. If you have any questions or concerns, please do not hesitate to contact our customer service team for assistance.
